

## **TREND CORREX TLSO**

**HCPCS: L0457**

One Size Adjustable – fits up to 3x

The Trend Correx TLSO is the most innovative TLSO that has been brought to the market in the past decade. It features an effortless sizing system with soft moisture wicking material and breathable zones throughout the brace. The most groundbreaking privileged feature of the brace is a pulley mechanism that's attached to the shoulder straps which allows the brace to telescope freely without manipulating the back of the brace like other TLSO's. By having a pulley system attached to the shoulder straps it allows the patient to apply the correct amount of force for optimal support every time. This system pulls the shoulders back and down to a neutral spinal position. Another feature of this brace is a movable chest strap. This allows the straps to be moved into position on the patient so it is not too high or low on the chest.
