Adjustable Range of Motion Hinge for Gladiator

Gladiator™ Knee Ligament Protection

The Gladiator uses a rigid hinge to protect knee ligaments, including post-operatively. The rigid strapping system firmly anchors the Gladiator to the leg, avoiding the need for larger, more expensive braces. Hinges are easily set to limit flexion and/or extension.

FEATURES

- Length: 15"
- Silicone gel patella ring (pull-on only)
- Easily adjustable flexion / extension settings without tools
- Open patella
- Pull-on or front-closure design
- Fits left or right

INDICATIONS

- ACL
- PCL
- LCL
- MCL
- Knee Instability

Product

Product	Product #
Gladiator - Open Patella - Ultima™ Material	4134*
Gladiator - Open Patella - Stratus™ Material	6136*
Gladiator - Front Closure - Open Patella	5136*

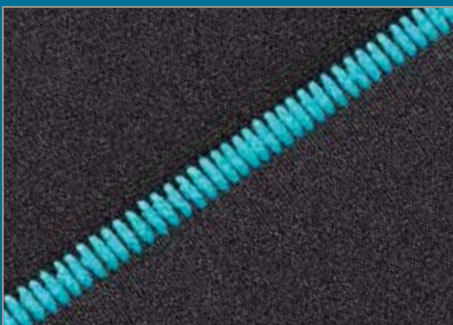

Note: To indicate size, **replace** * with corresponding number from the sizing chart on the back cover.

CrossFire™ Line

CrossFire products offer two major differences compared to other products. First, all CrossFire products have a unique back panel design that offers comfortable compression throughout the full range of knee flexion. Second, each CrossFire product is available in a front closure option we call Hybrid™, because it offers the compression of a pull on sleeve and the ease of donning and doffing of a wrap around.

ActiveSeam™ Stitching

With no overlapping material, our seams are flatter than other stitches and are 30% stronger than standard seams.

Hybrid™ Front Closure

An inner sleeve helps patients with donning and provides better compression than any wrap-around on the market.

Cirrus™ Our Thinnest Material

The CrossFire cut uses our thinnest and most elastic material – offering optimal compression without bunching or binding.
